PROFESSIONAL SUMMARY

Frontend Engineer with 2.5+ years building production, multi-tenant SaaS in React.js, Next.js and TypeScript, with Vue 3 experience. Shipped three platforms end to end – AI social media marketing, commission and payroll, and affiliate e-commerce – covering conversational AI, AI media pipelines and real-time WebSocket layers. Specialize in App Router architecture, performance optimization and reusable component libraries.

TECHNICAL SKILLS

- **Core:** JavaScript (ES6+), TypeScript, HTML5, CSS3, React.js 18 and 19, Next.js 14 and 15 (App Router, SSR, SSG, ISR), Vue 3 (Composition API, Pinia, Vue Router, Vuetify), React Hook Form, Zod, Recharts
- **State & Data:** Redux, Zustand, Context API, TanStack Query, TanStack Table, REST APIs, GraphQL
- **AI Integration:** AI campaign and content generation, LLM prompt workflows, text-to-video (Veo, Sora, Runway), AI voice-over (ElevenLabs), OpenAI APIs, AI chat interfaces
- **Styling & UI:** Tailwind CSS, shadcn/ui, Radix UI, Bootstrap, scroll-driven animation, parallax and micro-interactions, responsive design, accessibility, dark and light theming
- **Integrations:** Ayrshare, Stripe, Socket.IO, Laravel Echo and Reverb, Pusher, KafkaJS, Twilio, SendGrid, Weglot, Google Website Translator, GSAP (ScrollTrigger), Lenis smooth scroll
- **Backend & Architecture:** Node.js, Express, Mongoose, REST API design, JWT and bcrypt authentication, rate limiting, Cloudinary uploads, multi-tenant SaaS, role-based access control, MFA, SSR and SEO optimization, Core Web Vitals, i18n
- **Tools & Databases:** Git, Docker, AWS CodeBuild CI/CD, Vite, Webpack, pnpm, Jira, Postman, Agile and Kanban; PostgreSQL, MongoDB, Redis

PROFESSIONAL EXPERIENCE

React Developer Apr 2024 – Present

WebCodeGenie Technology Pvt. Ltd., Ahmedabad, Gujarat

KLOZR – AI Social Media Marketing and Sales Automation Platform

- Built three production Next.js 14 App Router applications in TypeScript, a customer control center, a multi-tenant Super Admin panel and a marketing site, spanning 90+ routes and a shared reusable component library.
- Developed KLARA, a conversational AI campaign-generation agent with a guided multi-step builder, 15+ custom input types and live campaign scoring, reducing campaign setup from hours to minutes.
- Integrated Ayrshare to publish and analyze content across 12+ social platforms including Instagram, Facebook, TikTok, LinkedIn and YouTube, classifying publish failures by cause so only customer-recoverable ones surfaced a one-click reconnect.
- Delivered AI media generation and editing for text-to-video (Veo, Sora, Runway), image and carousel generation and AI voice-over (ElevenLabs), including a full-screen video editor with scene timeline, overlays and undo/redo.
- Replaced polling with a Laravel Echo, Reverb and Pusher WebSocket layer for multi-minute AI generations, invalidating only the affected TanStack Query keys so finished media appeared without refetching unrelated data.
- Built a content calendar, post editor, Recharts KPI dashboards and an AI-assisted direct message inbox.
- Delivered a multi-tenant Super Admin panel with role-based access control, MFA, audit logs and 40+ CRUD modules, plus Stripe-backed subscription and plan builders with usage caps.
- Optimized performance and SEO through SSR, SSG and ISR, route-based code splitting and lazy-loaded editors; containerized with Docker and released via AWS CodeBuild CI/CD.

Tech: React.js, Next.js 14, TypeScript, Zustand, TanStack Query, Tailwind CSS, shadcn/ui, Ayrshare, Stripe, Laravel Reverb, Docker

KLOZR Retail – Marketing Website (Scroll-Driven Animation)

- Built the KLOZR marketing site as a scroll-driven single-page experience, implementing 19 GSAP ScrollTrigger timelines across 18 animated sections using scrubbed playback, pinning and staggered reveals.
- Created parallax depth effects with yPercent transforms and scroll-snapped section transitions, with ScrollToPlugin powering smooth anchor navigation.
- Drove Lenis smooth scrolling from the GSAP ticker rather than its own loop, keeping scrub-linked timelines frame-synced, with gsap.matchMedia for responsive variants and gsap.context for scoped cleanup.

Tech: Next.js 14, TypeScript, GSAP (ScrollTrigger, ScrollToPlugin), @gsap/react, Lenis, Tailwind CSS, Zustand

PAYD – Multi-Tenant Commission and Payroll Platform (Admin Portal and Rep Portal)

- Built two Next.js 14 App Router TypeScript applications: a super-admin portal for tenants, roles and finance, and a sales-rep portal for commissions, wallet, pay stubs, sales and team management.
- Developed a commission plan builder supporting versioned plans, SKU and tier rules, legend tiers and spiff rules, alongside payout runs, pay-stub drawers and tax-year reporting views.
- Implemented cross-domain admin impersonation via a one-time Redis token handover, letting super admins assume tenant and branch admin sessions across separate root domains.
- Built granular role-based access control with OTP login, invite acceptance, audit logging and a QR-code referral join flow, plus PAYE AI chat panels and Laravel Echo real-time updates.

Tech: Next.js 14, React 18, TypeScript, TanStack Query, Zustand, Radix UI, Zod, Laravel Echo, Pusher, Docker

HailStorm – Weather Data Visualization Platform

- Developed a web application visualizing AccuWeather hailstorm data on Google Maps, using the Maps API and Drawing Tools to plot and annotate hail-affected regions for administrator analysis, with GraphQL data, Socket.IO live updates and automated OpenAI, Twilio and SendGrid alerts.

Tech: React.js, Node.js, MongoDB, GraphQL, Socket.IO, Google Maps API, OpenAI, Twilio, SendGrid

Sales CRM – Lead and Opportunity Management Platform

- Developed a Sales CRM for lead and opportunity management with pipeline tracking, lead assignment, activity history and project-tracking modules, plus multi-channel communication across call, SMS, email, WhatsApp and video backed by Socket.IO real-time messaging and KafkaJS event streaming.

Tech: React.js, Node.js, Express, MongoDB, Redis, KafkaJS, Socket.IO, NodeMailer

ORYGN / Onyx – Multi-Tenant E-Commerce and Affiliate Platform (Vue 3)

- Built the ORYGN storefront in Vue 3 and Vite with file-based routing and layouts across 20 pages (shop, product detail, multi-step cart, checkout), multi-tenant via X-Tenant and X-Storefront headers with sponsor-subdomain referral attribution.
- Developed the affiliate hub in Vue 3 and Vuetify with CASL permission-based access control, ApexCharts dashboards, a TipTap editor, vue-i18n localization and Sentry monitoring.
- Built a referral and rewards system with redeemable points and admin tooling for product and inventory management, and an AI chat assistant delivering product details and personalized recommendations.

Tech: Vue 3, Pinia, Vuetify, Vite, CASL, ApexCharts, TipTap, PHP, PostgreSQL, Redis, Docker

PROJECTS

Trustify Trips – Verified Travel Marketplace (Full-Stack Side Project)

- Built a full-stack travel marketplace across three repositories: a 20-route customer site and an admin panel on Next.js 15 App Router with React 19, TypeScript and Tailwind CSS v4, backed by an Express and Mongoose REST API spanning 18 feature modules with JWT and bcrypt authentication, Helmet, CORS, per-IP rate limiting and Cloudinary uploads.
- Confined fetch to one module classifying network, HTTP and malformed responses into a single typed error, since CORS rejections surface as status 0 rather than a real code; split server state into TanStack Query and device state into Zustand with hydration gating.

Tech: Next.js 15, React 19, TypeScript, Tailwind CSS v4, TanStack Query, Zustand, Node.js, Express, MongoDB, JWT

EDUCATION

B.Tech, Computer Engineering 2024

Government Engineering College (GEC), Modasa, Gujarat | **Languages:** Hindi, Gujarati, English
